PS500

The PS500 can be configured to detect up to five gases with its electrochemical and catalytic sensors, photo ionisation detectors (PID), and infrared capabilities. "Plug and Play" maximises flexibility by allowing other gases to be detected, by simply inserting a new smart sensor assembly.

The PS500 is effective in noisy environments, featuring a loud (95dB) penetrating and distinctive audible alarm together with a high visibility visual alarm. With a robust, rubberised casing guaranteeing Hi-Impact resistance, the PS500 is ideal for the most demanding industrial environments.

An optional internal pump allows both pumped or diffusion measurements. If the pump is fitted, it can be easily turned on/off, depending on application. E.g. pump on to perform pre-entry measurements correctly, pump off for confined space working.

Automatic Bump Testing and Calibration

To provide accurate performance and results, the PS500 has to be properly used and maintained.

The Auto Bump & Calibration Station (ABC) provides bump testing, calibration and data management options and is compact, robust and intuitive to use.

Two versions of the ABC are available allowing either a single gas cylinder or up to three cylinders to be connected.

The ABC is fully configurable and can operate in three distinct modes of operation:

1. Standalone

- No PC or network connection required
- Simple setup and configuration
- Results stored on ABC
- USB access for results extraction
- Settings App for easy printing of calibration certificates

2. PC

- PC / laptop connected to ABC
- Setup and configuration using GMI flexiCal Plus software
- Results stored on the PC / laptop
- Easy access to all results
- Powerful data management / calibration certificate generation

3. Ethernet

- Multiple ABC's can be connected to a network
- Setup and configuration using GMI IMS Settings software
- All results stored on the IMS database
- Easy access to all results
- Powerful data management / calibration certificate generation
