

UltraRAE 3000

Portable Handheld Compound-Specific VOC Monitor

Dual detection mode for total benzene exposure assessment: 60-second snapshot or 15-minute STEL measurement

High sensitivity to benzene (down to 50 ppb) providing a lower detection range for potentially lower future benzene exposure limits

Lower risk of false alarms through advanced speciation method producing benzene readings you can trust

Total VOC measurement mode with extended range of 0.05 to 10,000 ppm

The UltraRAE 3000 is the most advanced Compound-Specific Monitor on the market. Its Photoionization Detector's (PID) extended range of 0.05 to 10,000 ppm in VOC mode and 50 ppb to 200 ppm in benzene-specific mode makes it an ideal instrument for applications from entry pre-screening during refinery and plant maintenance to hazardous material response, marine spill response and refinery down-stream monitoring.
