

Shhh! I'm trying to work

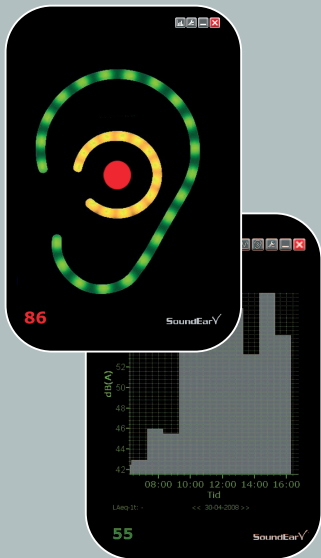

New noisemeter for open-plan offices and call-centres

Many employees find the noise level in open-plan offices and call-centres both annoying and distracting. Sound familiar? Then it's time to do something about it with the new SoundEarV that has just come on to the market. SoundEarV sends an instant message as soon as the noise level gets uncomfortably loud.

SoundEarV enables each member of staff to receive a message when the pre-set noise level is exceeded – a pop-up function warns against the fact that the noise limit has been exceeded – without disturbing the work being done on the computer at the time.

SoundEarV keeps a record of the measurements for up to 30 days.

It's up to you where to set the noise limit in the interval between 50-100 dB(A) and for how long the limit may be continuously exceeded before the warning appears.

SoundEarV

NEW NOISEMETER FOR OPEN-PLAN OFFICES AND CALL-CENTRES

Do you work in an open-plan office? Do you sit in a call-centre answering telephones day in and day out? Yes – then listen up and listen good: many employees in workplaces like yours find the noise level both annoying and distracting. Now is the time to do something about it with the new SoundEarV that has just come on to the market. We're not talking about an expensive or complicated solution – SoundEarV is computer based. Plain, simple and easy.

Use SoundEarV as a simple tool towards a better work environment and greater efficiency

SoundEarV can be used by everyone who sits at a computer. The user sets the limit as to when, i.e. at what noise level, the alarm signal is triggered, where an ear pops-up on the screen – without disturbing the work being carried out on the computer at the time. Furthermore, the program can keep a statistical record of the noise level, so it is possible to look back and see if and when there have been any peak situations.

Armed with precise measurement records it becomes easier to ask people around you to keep the noise level down and acts as a clear incentive to change one's own behaviour pattern. It also prepares the way for changing shrill ringing tones, putting up partitions or altering the office layout. SoundEarV supplies the documentation – the rest is up to you!

Danske Bank gives green light to SoundEarV

Many offices have already started using SoundEarV, and employees at Danske Bank's call-centre in Taastrup, where SoundEarV has been tested, are more than willing to recommend this noise-meter to other workplaces where noise is a problem.

The results of the survey among employees at Danske Bank show a clear signal:

- 83 % said that they found the program easy to use.
- 66 % said that they meant that SoundEarV had caused them make less noise in the room.
- 67 % said that they felt that their colleagues had made less noise than usual.
- 84 % said that they would recommend SoundEarV to others working in open-plan offices or call-centres.
